

## Token

The Bucket token is a security token that will pay out profits to token holders. In this offering, the company is offering 28% of its profits for 420m of its tokens.

## Allocation

- 1) Profit pool tokens will partially fund profit payouts for first 10 years (growth phase) in order to augment retained earnings.
- 2) Profits payable to Reserves, Employees and Founders will be held back as retained earnings.

## Investor Details

- **Price/Token:** \$0.10 USD
- Accredited Investors Only
- 1-Year Lock Up (Reg-D)
- **Timeline:** 3 Private Sale Rounds
- **Discounts:** First-Come, First-Serve
- **Token Distribution:** Pre-End 2018
- **Vesting:** 1 to 4 Years

## Team & Advisors

**Francis Hwang:** CEO  
**Daniel Kam:** President, COO  
**Francine Leodolter:** VP of Marketing  
**Mike Silvers:** VP of Product  
**Michael Oh:** VP of Finance  
**Jenny Cheng:** VP of Operations  
**Mac Ling:** Managing Director, Asia  
**The Bureau:** Blockchain Agency Advisor  
**Charles Lee:** Lead Advisor

## Mission

Bucket is a real-time physical currency capture and virtualization platform utilizing blockchain technology. Our aim is to accelerate humanity's transition to a cashless society by facilitating the transition of physical coins and eventually paper bills into digital currency.

## Technology

### BLOCKCHAIN AUDIT LEDGER

All incoming transactions and outgoing cash-outs in the Bucket environment are committed to the Dispatch protocol, which achieves high transaction throughput with no transaction fees due to its unique DAPoS consensus algorithm.

The Bucket token will pay out profits, which is a function of our underlying financial performance. The goal is to make the fundamentals that drive that profit available publicly for review by any current or potential token holder.

### HYBRID ARCHITECTURE

Our hybrid architecture consists of a back end serviced by Azure Functions, built upon the Dispatch Labs Distributed Ledger, where each transaction is asynchronously recorded and tagged with metadata to allow the public to audit reported revenues. This hybrid solution allows us to provide you with a high quality, responsive, enterprise-grade product that offers the transparency and immutability of blockchain technology.
